### For quick ground coverage choose Stampede™

Stampede™ is a quick growing Dianella caerulea that spreads with underground rhizomes. This characteristic enables it to create a mat of roots and foliage for ground stabilization and weed suppression.

For this reason it is most suited to civic, commercial and residential landscaping designs.

Stampede is a compact variety reaching 35-45cm in height. In warmer climatic regions expect Stampede to reach 45cm.

**Pictures**

1. Stampede in gravel landscaping.
2. Stampede spreads by producing underground shoots that emerge up to 0.5m away from the original plant.
3. Stampede has a bushy habit.

Stampede is the trade name of protected variety 'Newplad1'

The words 'Design Edge' and 'Stampede' are trade marks of Sprint Horticulture Pty Ltd

## Climate Zones

Over the past years Australia has experienced some extreme weather from droughts to significant rainfall. The climatic tolerances of a variety must therefore be measured not just according to temperature extremes, but also by seasonal rainfall patterns. The adjacent map shows four major climate zones for the Australian continent. Zones 2 and 4 have wet summers while Zones 1 and 3 have wet winters.

To assist in variety selection, please review the Specification Sheet above which nominates the recommended climate zone for each variety.
