**Best for:**

Use for softening edges of paved surfaces, and massed planting in large spaces.

Climatic Zone: 1 - 4

**A cracker of a variety!**

Crackerjack™ is an Australian grass that exhibits a strong, yet graceful presence in the landscape. Its fine leaves hide the effects of any leaf tips drying out, caused by low rainfall in summer periods. This ensures a fresh appearance is maintained year round.

Crackerjack has become popular in softening hard landscapes. The fine leaves of Crackerjack sway gracefully in the wind and create the feeling of a soft flimsy element, contrasting perfectly with hard paved surfaces.

Crackerjack's new leaves emerge blue and mature to green with age. Because its flowers are positioned deep in the foliage it is well suited to high pedestrian areas as there is very little danger from getting spiked by drying flowers.

## Pictures

1. Crackerjack ideal for residential use. Softens the landscape with neat spherical tufts of fine leaves.
2. Tough variety for commercial areas, the soft to touch foliage is suited for high pedestrian walkways.
3. Mass planted Crackerjack fills wide garden spaces.

Crackerjack is the trade name of protected variety 'Merlom Ruby'.

## Climate Zones

Over the past years Australia has experienced some extreme weather from droughts to significant rainfall. The climatic tolerances of a variety must therefore be measured not just according to temperature extremes, but also by seasonal rainfall patterns. The adjacent map shows four major climate zones for the Australian continent. Zones 2 and 4 have wet summers while Zones 1 and 3 have wet winters.

To assist in variety selection, please review the Specification Sheet above which nominates the recommended climate zone for each variety.
