A robust Dianella ideal for revegetation and stabilizing embankments

Explorer™ develops a strong and spreading underground root system that makes this variety an excellent choice when selecting plants for revegetation or for stabilizing embankments. Each plant has the potential to spread 90cm in diameter. For a dense cover plant at 80cm spacing.

Above ground the upright pluming habit of broad mid green leaves creates a verdant green 'scape' in landscapes, under trees or beside paved areas. In mid to late spring a multitude of blue coloured berries provides a spectacular display just above the foliage.

Explorer is a very hardy, drought tolerant Australian Dianella variety. It prefers a full sun to part shade location. The words 'Design Edge' and 'Explorer' are trade marks of Sprint Horticulture Pty Ltd

Climate Zones

Over the past years Australia has experienced some extreme weather from droughts to significant rainfall. The climatic tolerances of a variety must therefore be measured not just according to temperature extremes, but also by seasonal rainfall patterns. The adjacent map shows four major climate zones for the Australian continent. Zones 2 and 4 have wet summers while Zones 1 and 3 have wet winters.

To assist in variety selection, please review the Specification Sheet above which nominates the recommended climate zone for each variety.
